Flight 19, consisting of five torpedo bombers, disappears in the Bermuda Triangle on December 5.

Scientists from Great Britain conclude that ship disappearances in the Bermuda Triangle are most likely caused by large rogue waves.

The SS *El Faro* sinks with 33 crew members on board. It is considered the worst U.S. maritime disaster since 1983.

While it is uncertain where exactly they were lost, two sister ships to the USS *Cyclops*, the USS *Proteus* and the USS *Nereus*, also vanish during their travels.

The USS *Cyclops*, a more than 500-foot-long (152-meter-long) ship, disappears without a trace while traveling to Baltimore.

The term "Bermuda Triangle" is first used by reporter Vincent H. Gaddis in an article that appeared in *Argosy* magazine.
