Number the events below in the order they would appear on the timeline. Write the number in the box beside each event.

The first feature-length CGI animation, *Toy Story*, is released. It was later added to The United States National Film Registry for being the first of its kind.

The Royal Institute of Technology in Sweden creates a 49-second animation of a car traveling down a highway.

James Cameron creates an entire CGI world with *Avatar*. It remains the world's highest grossing film for 10 years.

A new adaption of *The Lion King* is made using new, incredibly realistic CGI technology.

Animators of Disney's *Frozen* create a program called the Matterhorn to animate snow properly.

The Polar Express is the first 3D computer-animated film to be created using motion capture.
